TATA STEEL £1.25 billion investment at Tata Steel UK

Investment in a new electric arc furnace, two new ladle metallurgy furnaces and new pickle tanks, as well as upgrades to two casters and the hot strip mill.

Steel plant

There will be investment in two new ladle metallurgy furnaces. These allow extended treatment times in secondary metallurgy to enable more complex steel grades to be produced.

Continuous casting

Tata Steel will also invest in two of Port Talbot's casters (Caster 1 and 3) which transform molten steel into solid rectangular slabs.
